-!- FUNCTION: Could regulate proteolytic events associated with testicular germ cell maturation.
-!- SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Removed in mature form (Potential)
                                                                                                                                                                                                                                                                                                                                                                       Isoid=Q9Y6M0-3; Sequence=VSP_005390;
-!- TISSUB SPECIFICITY: Expressed predominantly in premeiotic testicular germ cells, mostly late pachytene and diplotene spermatocytes.
-!- SIMILARITY: Belongs to the peptidase SI family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PERMYS; PRO0089; Trypsin, I.

(Potential). -1- TISSUB SPECIFICITY: Testis. -1- DEVELOPMENTAL STAGE: Expressed in post-meiotic testicular germ -!- FUNCTION: Could regulate proteolytic events associated with testicular germ cell maturation.

This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the Buropean Bioinformatics Institute of Encircle of the are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/ -!- SIMILARITY: Belongs to the peptidase \$1 family.
-!- CAUTION: Ref.3 sequence differs from that shown due to a stop codon in position 315.

or send an email to license@isb-sib.ch).

Biol. Chem. 274:30784-30793(1999). SEQUENCE OF 220-321 FROM N.A.

Mittman S., Agnew W.S.;
"Organization and alternative splicing of CACNAIH.";
Submitted (JAN-201) to the EMBL/GenBank/DDBJ databases.
-I. SUBCELLULAR LOCATION: Membrane-anchored (Potential).
-I. TISSUB SPRCIFICITY: Expressed in many tissues.
-I. POLYMORPHISM: There are two alleles; gamma-I and gamma-II which differ by 5 residues. subfamily.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C,Coment: This protein, synthesized in the liver, circulates as a noncovalent complex w C,Comment: The zymogen is activated by factor XIIa, which cleaves the molecule into a light linked by one or more disulfide bonds.

G, Superfamily: coagulation factor XI; trypsin homology

```
A Molecule type: mRNA
A Residues: 1-274 <MI2>
A Consider type: mRNA
A Residues: 1-274 <MI2>
A Conserved to the sequence GB-M30038
A Conserved to the sequence from Fig. 4 is inconsistent with that from Fig. 2 in having 205-Pro
C Superfamily: trypsin; trypsin homology
C Superfamily: trypsin; trypsin proteinase; zymogen
C Superfamily: trypsin; proteinase; zymogen
C Superfamily: trypsin sequence #status predicted <SIG>
F;1-21/Domain: activation peptide #status predicted <ACT>
F;1-21/Apmain: trypsin nomology <TRY>
F;31-224/Domain: trypsin homology <TRY>
